

## Pediatric cardiology · Barnkardiologi

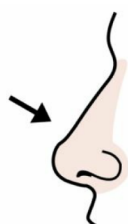

### MBR – multi-resistant bacteriae

### MRB—multiresistenta bakterier

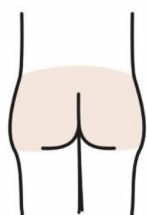

Did your child visit a hospital or primary care center outside Sweden within last year? If so, you have to have a bacterial swab at least one week before your child is going into surgery. Bring this paper to a primary care center or pediatric service.

Har ditt barn varit på sjukhus eller vårdcentral utanför Sverige det senaste året? I sådana fall måste ni ta ett bakterieprov senast en vecka innan ditt barn ska opereras. Ta med dig detta papper och gå till en vårdcentral eller barnmottagning.

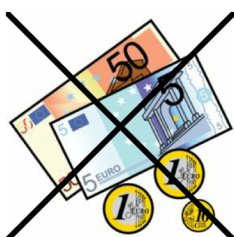

Information to primary care center or pediatric service.  
My child needs to have a specimen taken from:  
- Nose  
- Throat

Information till vårdcentral eller mottagning.  
Mitt barn behöver odling från:  
- Näsa  
- Svalg

- Perineum (between rectum and the genitals)  
- Rectum/faeces with addition VRE and ESBL  
- Perineum (mellan ändtarm och könsorgan)  
- Rectum/faeces med tillägg VRE och ESBL

The patient has to leave the sample according to the Contageous Diseases Act. It is free of cost for the patient. The caregiver taking the sample does not have to pay for the analysis.

Smittskyddslagen säger att patienten ska göra odlingen. Patienten ska inte betala. Ni som tar odlingen behöver inte betala för analysen.
